

Portable Air Conditioning

Here at New-Air we offer the sales or hire of Portable Air Conditioning units, please refer to the following information to determine the type of system that may suit your needs:

'Umbilical' Style Systems

These systems consist of an internal fan coil and external condenser unit similar to a standard 'split' air conditioning system. The internal unit is floor mounted with interconnecting services in the form of flexible hose at approximately 2.5 metres in length. Condensate waste (water) is pumped to the external unit for drainage. These systems are suitable for use for a temporary to permanent basis. Mains power can be taken from a local 13 Amp socket enabling portability of the systems dependant on access for interconnecting services.

'Monobloc' Style Systems

These systems consist of a floor standing internal fan coil coupled to an exhaust vent to reject heat from the air conditioned environment. These systems are suitable for a temporary measure where there is the ability to exhaust the warm air through a window left ajar, for a more permanent installation it is possible to vent to an exhaust plenum fitted with weather / vermin proof grille. Condensate waste (water) is stored in an internal compartment which can be drained when required. Mains power can be taken from a 13 Amp socket enabling portability of the systems dependant on the ability to exhaust the warm air.

We offer very competitive rates for the sale or hire of these types of system with an extensive catalogue at hand to ensure we provide you with the right system for your circumstances.

Please feel free to contact us for a free no obligation quotation on (023) 8060 5960, where we can arrange a site assessment to determine your requirements.
